## Avoiding Danger from Underground Services

This is a unique course, which has been verified and moderated by the Worlds leading occupational safety organisation. It is essential for any company whose staff may come into contact with underground services.

People continue to be seriously injured through service strikes and companies lose thousands of pounds through repairs, delays and lost reputation. Yet still there is a reliance on traditional service avoidance training, limited to the demonstration of how to operate a CAT and Genny.

This one day course recognises that working safely near underground services requires a deeper understanding, and addresses this concern. As a result, it has been selected as a mandatory training requirement for all site managers and supervisors employed by Mansell, who recognise that good quality, externally verified training, saves money and may just save a life.

Candidates are trained to understand their legal responsibilities and the importance of continual and ongoing risk assessment. our chartered safety advisers ensure the key elements of HSG47 are covered:

- ▶ What is in the ground?
- ▶ Planning the work and risk assessment
- ▶ Maps and plans
- ▶ Identifying services using a CAT and Genny
- ▶ Understanding safe digging techniques
